

Abies koreana

Высота	10 - 12 m, slow growing
Ширина	4-6 m
Крона	narrow pyramidal, dark, dense crown
Кора и ветви	bark grey with purple lustre, smooth, later peeling slightly
Лист	dark green needles, 1 - 2 cm, bluish white underneath, evergreen
Цветы	unremarkable, fragrant flowers
Плоды	upright cones, cylindrical, violet to steel blue, autumn
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше
Форма	солитерное хвойное дерево
Происхождение	South Korea

A conifer with a narrow, pyramidal shape that grows more slowly than most other *Abies* species. When young, the tree is somewhat irregularly shaped, but later it grows into a very uniform pyramid with an ultimate width of 3 - 4 m. The branches grow closely together, are yellowish grey in colour and have small buds with profuse sap. The dark green needles grow close together, almost forming a brush. *A. koreana* is lovely all year long thanks to the bluish white colour on the underside of the needles. Unlike other *Abies* species, the upright cylindrical cones are 4 - 7 cm long and about 2.5 cm wide, already when the tree is still young. At first, they are still green, but later they take on a violet to steel blue colour. There are several interesting cultivars of *A. koreana* on the market.
