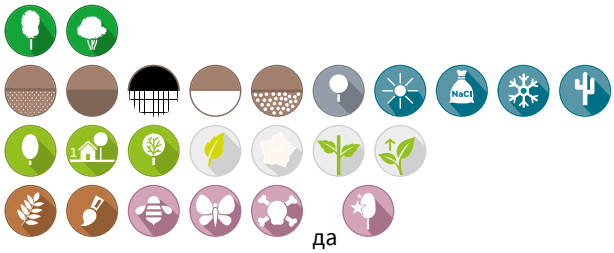
Robinia pseudoacacia 'Frisia'



Высота	12 - 15 m
Ширина	5-10m
Крона	oval to rounded, half-open crown
Кора и ветви	greyish brown, roughly grooved, young twigs have red thorns
Лист	imparipinnate, 20 - 30 cm, 9 - 19 leaf segments, 1.5 – 4.5 cm, golden yellow, feathered leaf
Осенний окрас	желтый
Цветы	pendulous clusters up to 15 cm, cream♂white, June, rarel♂blooming, fragrant flowers
Плоды	pod, reddish brown, 5 - 10 cm long, rarely develops
Колючки/шипы	Yes
Ядовитость	ядовитые части
Вид почвы	places little demands on soil, provided there is good drainage
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate, particularly in rich soil
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, устойчив к соли для улиц
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, устойчив к соли для улиц, притягивает бабочек
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	W. Jansen, Zwollerkarspel, The Netherlands, 1935

A robustly growing tree, particularly when young, with a relatively narrow, vertical manner of growth. Branches protrude later, so the crown becomes oval to round. Height 12 - 15 m, width approx. 5 - 8 m. The greyish brown bark is rough and deeply grooved. Young twigs are bright brown and have striking wine-red thorns that later turn brown. The compound leaves consist of 9 to 19 elliptical, leaf segments that are 2 – 4.5 cm in size. The leaves have an orange-yellow colour when they emerge, turn greenish yellow in summer, and deep golden yellow in the autumn. 'Frisia' leafs out late and keeps its leaves long into the autumn. Flowers and fruit only rarely appear on the tree. Grows well in light, calcareous soil, has a superficial root system. Given the tree's sensitivity to wind, it should preferably be planted in a sheltered site.
