

Cedrus deodara 'Karl Fuchs'

Высота	15 - 20 (30) m
Ширина	10-15m
Крона	narrow pyramidal, dark, dense crown
Кора и ветви	first grey and smooth, later becoming rough, grey twigs
Лист	needles in bundles, silvery greyish blue, 2.5 -5 cm , evergreen
Цветы	unremarkable, fragrant flowers
Плоды	reddish brown cones, 8 - 12 cm, 1 to 2 together
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	nutrient-rich, well-permeable, acidic soils
Мощение	неустойчив к мощению
Зона зимостойкости	7a (-17,7 до -15,0 °C)
Устойчивость к ветру	moderate
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево, солитерное хвойное дерево
Происхождение	G. Horstmann, Schneverdingen, Germany, 1979

This cultivar was selected from Cedrus deodara seed that came from Pakistan. The intense, blue-grey to silvery blue-grey colour of the needles distinguish this tree from the species. The twigs are also grey. Its manner of growth is narrow and pyramidal, a second difference in respect of the species. The needles grow in groups, with up to 30 bundled together. The ovoid, upright cones grow singly or in pairs and have a round top. 'Karl Fuchs' is less sensitive to frost than the species. Nonetheless, it prefers a sunny site sheltered from wind. The tree does not thrive well in high-pH soils.
