

Cedrus deodara 'Pendula'

Высота	up to 5 m
Ширина	5-8m
Крона	broad weeping, dark, dense crown, capricious growing
Кора и ветви	first grey and smooth, later becoming rough
Лист	bundles, evergreen
Цветы	unremarkable, fragrant flowers
Плоды	reddish brown cones, 8 - 12 cm, 1 to 2 together
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	nutrient-rich, well-permeable, acidic soils
Мощение	неустойчив к мощению
Зона зимостойкости	7b (-14,9 до -12,3 °C)
Устойчивость к ветру	moderate
Применение	промышленные зоны, небольшие сады
Форма	штамбовое дерево, солитерное хвойное дерево
Происхождение	Germany, approx. 1850

Broad, weeping cultivar with branches hanging down to the ground. If this Cedrus is not trained to grow upwards, it grows into a broad, spreading plant that is broader than it is high. If the branches are trained upwards, an irregular, broad, weeping shape develops. This makes 'Pendula' eminently suited as a solitary tree. The dark, blue-green needles grow in groups, with up to 30 bundled together. The ovoid, upright cones grow singly or in pairs and have a round top. 'Pendula' saplings are particularly sensitive to frost, requiring a sunny site sheltered from wind. Does not thrive well in high-pH soils.
