

Ginkgo biloba 'Tubifolia'

Высота	2 - 4 m
Ширина	2-4m
Крона	broad fan-shaped, light, open crown, capricious growing
Кора и ветви	twigs light brown, bark grey-brown, later deeply grooved
Лист	fan-shaped and curled into tubes, in clusters of 3 - 5, up to 5 cm long and wide, green
Осенний окрас	желтый
Цветы	green, inconspicuous, April/May
Плоды	fruitless cultivar
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any
Мощение	устойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	fairly to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	кашпо для деревьев, сады на крыше, промышленные зоны, небольшие сады, сады в патио
Форма	штамбовое дерево, разветвленное дерево, штамбовое хвойное дерево, солитерное хвойное дерево
Происхождение	Coenosium Gardens, Eatonville, WA, USA, before 1990
Синонимы	Ginkgo biloba 'Tubeleaf'

Slow-growing broad shrub type. Eventually grows into a small tree from 2 to 4 m tall, with a broad, fan-shaped crown. The crown is about as wide as it is tall. Twigs are light brown and smooth, mature bark is grey-brown and deeply grooved when older. The fan-shaped leaves of the first sprouting curl into a typical tube shape making them look like small cups. This curvature makes the matt green underside of the leaf visible. The leaves of the second sprouting, later in the summer are often dissected. The leaves are distinctly smaller than the species, growing to about half as long. In autumn the leaf turns yellow before falling. This small tree is unmistakeable due to the striking leaf shape and is suitable for (small) gardens.
