

## Pinus densiflora 'Umbraculifera'

Высота	2 - 4 m
Ширина	2-4m
Крона	broad fan-shaped, dark, dense crown, capricious growing
Кора и ветви	twigs light brown, bark brown-grey, grooved in rectangular plates
Лист	soft needles, straight to slightly wavy, 2 together, 3 - 10 cm, mid-green, evergreen
Цветы	in clusters b the young shoots, yellow, fragrant flowers
Плоды	oval cones, 3 - 6 cm long, 2 - 3 cm wide
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any, fertile, well-drained
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше, промышленные зоны, небольшие сады
Форма	многоствольное дерево, солитерное хвойное дерево
Происхождение	Japan, before 1890

Small, often multi-stemmed tree with a broad fan-shaped crown. The tree grows to 4 m tall and is usually just as wide or even slightly wider. The young twigs are light brown, mature bark is brownish grey and grooved in rectangular plates. The soft needles, which are in twos or threes, are 3 - 10 cm long and mid-green. They are straight to somewhat wavy so they are often intertwined. The needles of older branches fall off, which emphasises the tree's characteristic fan shape. The oval cones stand alone or in pairs and brown-yellow when ripening. This old Japanese form was introduced in 1890 although it had been bred for much longer under the local name, "Tanyosho". Its characteristic shape means it is a useful park tree that is also suitable for small gardens. Has few demands as to soil and can tolerate wind.
