

Pseudotsuga menziesii var. glauca

| | |
|--------------------------|---|
| Высота | 35-40 (65) m, fast growing |
| Ширина | 10-15m |
| Крона | narrow pyramidal, half-open crown |
| Кора и ветви | brown, grey, grey-black |
| Лист | blue-green, evergreen |
| Цветы | yellow-red, flowers in April |
| Плоды | hanging cones, long ovoid, reddish brown, 8 - 10 cm |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | all |
| Влажность почвы | устойчив к сухим почвам |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 5a (-28,8 до -26,1 °C) |
| Устойчивость к ветру | good |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру |
| Применение | промышленные зоны |
| Форма | штамбовое хвойное дерево, солитерное хвойное дерево |

This natural variety is more common in the interior of North America than the species *Pseudotsuga menziesii*. *Pseudotsuga menziesii* var. *glauca* occurs in the central part of the Rocky Mountains, from Alberta and British Columbia, Canada to New Mexico, USA in the south. The variety *glauca* remains slightly smaller, has a slightly narrower crown and has slightly shorter and thicker needles, up to about 3 cm long. The cones are also slightly smaller. Most striking feature is that the needles are significantly bluer in colour than the dark green needles of *Pseudotsuga menziesii*. Several named cultivars with blue-green and blue needles evolved from the variety *glauca*. The narrower crown shape combined with the characteristics of *Pseudotsuga menziesii*, both in terms of soil requirements and applicability, make this tree versatile in use. Grows on all types of soil. Very suitable for use as a solitary tree or in small groups in parks and (large) gardens. Hardiness zone: 5a
