

Taxus ×media 'Hillii'

Высота	3 - 5 m
Ширина	2-4m
Крона	ovoid/egg-shaped
Кора и ветви	twigs brown, bark reddish brown, later fibrous peeling
Лист	needles, arranged in two rows to spiral, center, 2–2.5 cm long
Цветы	inconspicuous, masculine, yellow buds
Плоды	fruitless cultivar
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	sandy, loamy soil, well-permeable
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	кашпо для деревьев, сады на крыше, промышленные зоны, сады в патио
Форма	солитерное хвойное дерево, растение для изгороди

Taxus ×media 'Hillii' is a strong large shrub to small tree with dense branching, giving it a compact, full-bodied appearance. At a young age, this cultivar grows broadly upright, but later clearly wider and rounder in shape. Because of its wider shape and dense branching, 'Hillii' is particularly suitable for wide (block) hedges and topiary. 'Hillii' resembles 'Hicksii' in name, but as a plant more like 'Greenland' and 'Overeynderi'. Not least because 'Hillii' is male and 'Hicksii' is female. The poisonous seeds are therefore not formed, although the foliage is also poisonous. However, 'Hillii' does flower profusely, visible by the small yellow buds and clouds of pollen when the plant moves. There are female plants in circulation under the name 'Hillii', but these are not true to type. It is an old cultivar, but still one of the most widely used. Tolerates, like other Taxus, heavy pruning well.
