

Thuja occidentalis 'Brabant'

Высота	10 - 15 m, fast growing
Ширина	3-4,5
Крона	narrow pyramidal, dark, dense crown
Кора и ветви	twigs green to orange-brown, bark reddish brown, scaling in narrow strips
Лист	scales, bright green, evergreen
Цветы	inconspicuous, fragrant flowers
Плоды	oval cones, light brown, scaly
Колючки/шипы	None
Ядовитость	ядовитые части
Вид почвы	any
Влажность почвы	устойчив к сухим почвам, устойчив к коротким наводнениям
Мощение	неустойчив к мощению
Зона зимостойкости	3 (-40,0 до -24,5 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	промышленные зоны
Форма	солитерное хвойное дерево, растение для изгороди
Происхождение	G.J.F. Rombouts, Steensel, the Netherlands, before 1984

Medium-size conifer with dense crown and a narrow pyramidal growth habit, 10 - 15 m tall. A tree with a height of 10 m is not much wider than 2.5 m. The bark is reddish brown and peeling off in long strips. The flattened, highly branched young twigs are green first, later turning orange-brown. The scaly foliage is arranged in shingle form. It is bright green and keeps this colour in winter too. When crushed the foliage gives off a characteristically pleasant fragrance. The blossom and the oval cones which follow are inconspicuous. Pruning is exceptionally well tolerated which has led to the popularity of 'Brabant' as hedge plant. The fact that the foliage does not change colour in winter adds value. Grows on any soil and is very hardy.
