

Tsuga canadensis 'Pendula'

Высота	3 - 4 m
Ширина	4-6m
Крона	broad weeping, half-open crown, capricious growing
Кора и ветви	smooth orange-brown bark, later blackish brown and grooved
Лист	needles, glossy green, greyish white underneath, 0.5 - 1.8 cm, evergreen
Цветы	unremarkable, yellow, flowers approx. 0.4 cm large
Плоды	hanging, ovoid cones, greyish brown about 1.7 - 2.8 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moisture-retentive and slightly acidic
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	bad
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	промышленные зоны, небольшие сады, сады в патио
Форма	солитерное хвойное дерево
Происхождение	Germany, before 1891

Slow-growing conifer with broad, pendulous branches that grow in various directions. The main trunk must be trained vertically to attain a vertical growth pattern. Height can then reach 3 - 4 m. Branches sometimes grow upwards at first and later to the side or hanging down. Young twigs however always grow straight down, creating a decorative tree that can ultimately grow to a width of about 5 m. If the plant is not trained upwards first during the cultivation stage, a creeping pattern develops. This makes the plant suitable for rock gardens and growing over walls. The top of the needles is glossy green, the bottom has 2 white stoma stripes. Short-stemmed, hanging cones appear after the unremarkable flowering. If the soil is overly calcareous, the needles turn yellow.
