

## Acer cappadocicum

Высота	10 - 18 m
Ширина	7-11m
Крона	wide egg-shaped, half-open crown
Кора и ветви	young twigs shiny green, striped
Лист	5/7 lobes, dark green, 8 - 14 cm
Осенний окрас	желтый
Цветы	yellow-green corymbs, circa 6 - 7 cm, May
Плоды	single-seeded, winged, light green
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	humic moist soil
Мощение	неустойчив к мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, притягивает бабочек
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Middle-East (North Turkey to Iran and in the Caucasus)

Medium-sized tree with a wide, strongly branching dense crown. The young twigs are of a shiny green, often with light grey stripes, which turn grey-brown later on. Yet, this variety is not a member of the “Snake bark maples”, because the stripes are too indistinctive. The dark green leaves have strikingly thin leaf stalks with milk sap. They are slightly shiny and have five to seven, distinctively pointed, lobes. In autumn they turn into deep yellow. A. cappadocicum is a tree that thrives well in a moist, humic soil. Do not plant the tree in wind-swept sites.
