

Acer palmatum 'Osakazuki'

Высота	4 - 8 m
Ширина	4-8m
Крона	round, half-open crown, capricious growing
Кора и ветви	brown to grey-brown, smooth
Лист	palmately lobed, deeply cut, green, 6 - 10 cm
Осенний окрас	оранжевый, красный
Цветы	pendent stalked panicles, purple-red, April/May
Плоды	winged nutlet (samara)
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well permeating humic sandy soil
Мощение	неустойчив к мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Japan, 1882

One of the more familiar and better cultivars of the large and shape-abundant group of Japanese maples. At first a solid shrub, when maturing growing into a small, multi-stemmed tree. Eventually it will become as wide as it is high. Slow growing. The leaf is palmately lobed and has seven, long pointed lobes. In spring it unfurls with an olive-brown colour, in summer it is dark green. In summer juvenile foliage is a striking orange. In autumn all the leaves get spectacular red and orange hues. 'Osakazuki' is one of the best cultivars with regard to autumn colours. The winged nutlets (samaras) are red too. A partially shaded site is best, but a sunny location will also be tolerated. The plant can be applied in gardens, parks and as a solitary.
