

## Acer platanoides 'Autumn Blaze'

|                                    |                                                       |
|------------------------------------|-------------------------------------------------------|
| Высота                             | 15 - 20 m, fast growing                               |
| Ширина                             | 10-15m                                                |
| Крона                              | ovoid, dark, dense crown                              |
| Кора и ветви                       | branches light brown, bark dark grey                  |
| Лист                               | 5/7 lobes, greenish-yellow                            |
| Осенний окрас                      | желтый, оранжевый                                     |
| Цветы                              | yellow-green, in corymbs, before the leaf development |
| Плоды                              | winged nutlets (samara), 3.5 - 4.5 cm long            |
| Колючки/шипы                       | None                                                  |
| Ядовитость                         | ядовитые части                                        |
| Вид почвы                          | any soil, except peat                                 |
| Влажность почвы                    | устойчив к коротким наводнениям                       |
| Мощение                            | устойчив к частичному мощению                         |
| Зона зимостойкости                 | 4 (-34,4 до -28,9 °C)                                 |
| Устойчивость к ветру               | not very sensitive, not resistant to sea wind         |
| Прочие виды устойчивости           | устойчив к морозам, зона 1 - 6                        |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, привлекает бабочек    |
| Применение                         | аллеи и широкие улицы, промышленные зоны              |
| Форма                              | штамбовое дерево, многоствольное дерево               |

Vigorously growing, large tree with a straight central leader and a regular, ovoid crown, up to 20 m in height. The young leaf is bright yellow to greenish-yellow. Later in summer it turns yellow-green. Very striking, especially in spring, but in summer, too, the brightly coloured young shoots give the tree a fresh appearance. In autumn the leaf turns yellow to orange. Not to be confused with Acer ×freemanii Autumn Blaze ('Jeffersred'), which is a completely different tree. Highly suitable for narrower avenues and streets, and on squares. Grows on any soil, but does not tolerate stagnating groundwater and peaty soils.
