

## Acer platanoides 'Columnare'

Высота	15 - 20 m
Ширина	8-10m
Крона	egg-shaped to columnar, dark, dense crown
Кора и ветви	bark dark grey, branches light brown
Лист	5/7-lobed, green, circa 20 cm, in autumn golden yellow
Осенний окрас	желтый
Цветы	yellow green, in corymbs, April, before leaf unfurl
Плоды	winged nutlets (samara), 3.5 - 4.5 cm long
Колючки/шипы	None
Ядовитость	ядовитые части
Вид почвы	any soil, except peat
Влажность почвы	устойчив к коротким наводнениям
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	not very sensitive, not resistant to sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, привлекает бабочек
Применение	аллеи и широкие улицы, узкие улицы, промышленные зоны
Форма	штамбовое дерево
Происхождение	Carrière, France, 1878

An old French cultivar which has an egg-shaped crown at first. When maturing the branches grow more upright and it becomes a columnar shaped tree. Spread up to circa 6 m. The columnar crown makes this tree very suitable for narrow streets and avenues. Trees grafted on rootstock remain smaller than trees grafted on root collars. These usually grow as multi-stemmed trees. The leaves are lobed and are of the species. When unfolding they have a brown-red colour, in autumn they turn yellow. The inflorescence is profuse and the flowers are hugely visited by bees. Fruits are of the species. Like 'Columnarbrood' this cultivar is very tolerant to any soil, but it does not thrive on a wet soil. Very tolerant to a city climate. The tree has a good wind resistance.
