

Acer saccharum 'Legacy'

Высота	18 - 20 m
Ширина	12-16m
Крона	wide conical to oval, dark, dense crown
Кора и ветви	grey bark, green-brown twigs
Лист	3/5-lobed, bright green, very glossy, 8 - 15 cm
Осенний окрас	желтый, оранжевый
Цветы	yellow-green, pendent panicles, April
Плоды	bare, widely winged, 2 - 2.5 cm long
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements, not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	bad
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	аллеи и широкие улицы
Форма	штамбовое дерево
Происхождение	Moller's Nursery, Gresham, Oregon, USA, 1981

Medium-sized to large tree with a regular, symmetrical branching crown. The crown is distinctively heavier than of the species. It spreads 9 to 10 m. The long and wide leaf is bright green and strikingly glossy. It is circa 1.5 times thicker than of the species and it turns yellow-orange to salmon-pink in autumn. Both the habit and the leaf shape resemble *A. platanoides*, the difference being that the bruised leaf of *A. saccharum* does not produce milky sap but a clear liquid. The inflorescence appears simultaneously with the unfurling leaves. The root system is shallow with many branching roots. Though the sugar maple thrives in many soils, a soil that is too wet is unsuitable for healthy growth. This cultivar is the best variety of the *A. saccharum* assortment to be applied in dry soils. Sensitive to salt for icy roads. Intolerant to hard surfaces.
