

## Aesculus xcarnea 'Briotii'

Высота	15 (20) m
Ширина	10-15m
Крона	round to wide pyramidal, dark, dense crown
Кора и ветви	grey-green, with light vertical grooves, non-sticky buds
Лист	usually 5 leaflets, dark green, circa 15 cm
Цветы	dark red, erect panicles, May
Плоды	few, less prickly than the A. hippocastanum
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all, preferably not too dry
Мощение	устойчив к частичному мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Trianon, France, 1858

Crossing between A. hippocastanum and A. pavia. The dense crown casts a dark shade. A mature tree seldom reaches higher than 15 m and gets circa 15 m wide. 'Briotii' grows slower than the species. The slightly shiny, opposite leaves are more folded than those of A. x carnea and can reach 15 cm across. They appear early, remain long on the tree and have a yellow brown autumn colour. The midrib is tinted red at the origin. The blood-red flowers do not appear until the tree is 8 to 10 years old and are bigger than those of the A. x carnea. The fibrous root system consists of a main root which branches out well and goes deep into the ground. The ground must not be too dry. Intolerant to asphalt surfaces unless the base area is large enough.
