

## Aesculus parviflora

Высота	3 - 5 m
Ширина	6-10m
Крона	flat-topped spherical, very broad, dark, dense crown
Кора и ветви	grey-brown, buds non-sticky
Лист	5/7 fingers, green, 8 - 20 cm
Осенний окрас	желтый
Цветы	white, in long erect panicles, 20 - 40 cm, July/August
Плоды	smooth, obovoid, 3 - 4 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few soil requirements, can tolerate paved surfaces
Влажность почвы	устойчив к коротким наводнениям
Мощение	устойчив к мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, привлекает бабочек
Применение	небольшие сады
Происхождение	South-eastern USA

Shrub-like plant that ‘only’ grows to 3 - 5 m high, but can attain up to 10 m breadth by suckering. The dark green leaves have 5 to 7 fingers and turn deep yellow in autumn. The flowering pattern is very attractive. The long flower panicles are usually 20 to 40 cm long and consist of numerous white flowers. The flowers have narrow crown petals and the stamens extend far outside the flowers. This gives the blossom a beautiful, delicate texture. The blossoming comes in July/August and is the latest in the season of all Aesculus species. The fruits are smooth and the seeds germinate very rapidly. Due to the more or less shrub-like, very broad habit, the plant is mainly suitable for use in large gardens and parks.
