

Aesculus pavia

Высота	6 - 8 (12) m
Ширина	4-6m
Крона	oval to globular, dark, dense crown
Кора и ветви	dark grey, smooth, conspicuous lenticels
Лист	5/7 leaflets, reddish unfolding, later fresh green, 8 - 15 cm
Цветы	panicles, pink red, June
Плоды	smooth, light brown, irregular crop
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	bad
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Форма	штамбовое дерево
Происхождение	south-eastern part of North America

Originally growing in damp places on river banks in the south-eastern part of North America where it forms a big shrub by nature. In culture it usually forms an average-sized tree with an oval-round, dense and compact crown. Eventual height circa 8 m, the crown will then be circa 4 m wide. Sometimes larger specimen can be found. The thick twigs bear non-sticky buds. The opposite leaves unfold with a reddish colour. They can reach 15 cm across and they consist of 5 to 7 palmatifid-compound leaflets, with an obovoid shape. These have deep-lying veins and are shed early in autumn. The pink red flowers sometimes have a yellowish hue and come in upright panicles up to 20 cm long. The tree thrives best in slightly moist soil. Good hardiness but susceptible to salt (for icy roads). Intolerant to hard surfaces.
