Alnus glutinosa

| Высота | 10 - 20 m , fast growing |
|--------------------------|--|
| Ширина | 6-12m |
| Крона | conical to oval, half-open crown |
| Кора и ветви | young twigs are purple grey, trunk later grey and fissured |
| Лист | obovate, shiny dark green, 4 - 10 cm |
| Цветы | catkins, brown yellow, oval, March/April |
| Плоды | ovoid strobiles, 1 - 2 cm |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | moist to wet, not too poor |
| Влажность почвы | устойчив к влажным почвам, устойчив к коротким наводнениям, устойчив к длительным наводнениям |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 3 (-40,0 до -24,5 °C) |
| Устойчивость к ветру | good |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц |
| Применение | побережье, промышленные зоны |
| Форма | штамбовое дерево, многоствольное дерево |
| Происхождение | Europe, North Africa, Caucasus |
| | |

This alder is native to almost entire Europe and grows mainly in moist areas. Sometimes growing into a multiple-stemmed, big tree. Now and then a mature specimen with a height reaching over 20 m can be found. The alternate leaf becomes 10 cm, is ovate and has a blunt tip. The stalked buds, which are grey violet, and the younger leaves feel sticky (glutinosa = sticky). Female catkins are oval and inconspicuous, \pm 0.5 cm long and the male catkins are brown yellow, \pm 7 cm long. Strobiles appear from September and persist long. The tree roots strongly and fairly deep. Poor tolerance to hard surfaces. Often used as brushwood in landscapes. Withstands severe pruning. Little susceptible to (sea) wind.
