

Betula albosinensis

Высота	6 - 10 m
Ширина	4-6m
Крона	wide pyramidal, loose, half-open crown
Кора и ветви	orange brown, flaking bark, red-brown twigs
Лист	ovate, acute-pointed, dark green, 6 - 8 cm
Осенний окрас	желтый
Цветы	catkins, light yellow, ♀ appearing with leaf, ♂ 8 - 13 cm, April
Плоды	fruit catkins, 3.5 - 4.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, притягивает бабочек
Форма	штамбовое дерево, многоствольное дерево
Происхождение	West China
Синонимы	Betula albosinensis var. septentrionalis

Birch with small leaves from the mountains in West China found at heights of up to 4 km. In spite of the slow growth specimen of over 10 m can be found there. The wide pyramidal crown has many thin, soft, weeping twigs with a red brown colour, width circa 6 m. The bark has an orange to orange brown colour and already flakes at an early age. The dark green leaf is bare on the topside, the underside is glandular haired. It is ovoid and acuminate. The leaf margin is double-toothed. Betula albosinensis opens early in spring and the leaf turns golden yellow in autumn. The green yellow flowers appear in pendulous catkins in April. B. albosinensis roots shallow with a fine branching root system and has many fibrous rootlets.
