Catalpa bignonioides 'Nana'

Высота	4 - 6 m
Ширина	5-7m
Крона	flat-topped globular, dark, dense crown
Кора и ветви	grey, shallow grooves
Лист	heart-shaped, fresh green, 10 - 15 cm
Цветы	none
Плоды	none, fruitless cultivar
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements, not in wet soils
Мощение	устойчив к мощению
Зона зимостойкости	6а (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate to poor
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	узкие улицы, кашпо для деревьев, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Pépinières Masson, France, ± 1850
Синонимы	Catalpa bungei HORT

A densely branched, spherical shrub, that when grafted on stock (C. bignonioides), can grow into a small, flat-topped, spherical tree. Depending on the graft union the height will be 2 - 2.5 m. The crown becomes circa 6 - 7 m wide. It is a slow growing tree. The grey brown, shallow fissured bark peels in plates and the hard wood of the twigs breaks easily. The acuminate and entire, heart-shaped leaf appears late in spring and is shed relatively early. It is considerably smaller and narrower than the species. When bruised a distinct smell is emitted. In autumn it turns yellow. Shallow rooting with fleshy roots. The tree can be pruned vigorously every few years to encourage the crown. Widely applied in small gardens, on squares and round-abouts.
