Celtis bungeana

Высота	10 – 15 m
Ширина	10-12m
Крона	round/spherical, half-open crown
Кора и ветви	twigs green, bark light grey, smooth
Лист	ovate to elongated, 4-9 cm long, glossy dark green
Осенний окрас	желтый
Цветы	inconspicuous, yellow-green, April
Плоды	drupe, 7 mm, black
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево

The medium to large Celtis bungeana forms a round crown. Later in life, the crown will sag more, becoming more flattened and broadly vase-shaped. The young twigs are green, the old bark is light grey and smooth. Most striking about this species are the shiny dark green leaves, which give the tree a vital appearance. The leaves have three main veins, which are most clearly visible on the underside of the leaf. The leaf margin is smooth, at most with a few small teeth near the apex. Flowering is inconspicuous, but does attract bees. The flowers are followed by small black fruits.

This Celtis prefers to grow on loamy soil. Tolerates drought and air pollution, making it a good future tree.
