

## Cercis chinensis 'Avondale'

|                                    |                                                                  |
|------------------------------------|------------------------------------------------------------------|
| Высота                             | 4 m                                                              |
| Ширина                             | 4-5m                                                             |
| Крона                              | broad vase-shaped, half-open crown                               |
| Кора и ветви                       | first-year branches (dark) brown, bark grey                      |
| Лист                               | round, 8 - 12 cm, glossy dark green                              |
| Осенний окрас                      | желтый                                                           |
| Цветы                              | deep purplish pink, in clusters, April/May                       |
| Плоды                              | brown, flat pods                                                 |
| Колючки/шипы                       | None                                                             |
| Ядовитость                         | неядовитый, обычно                                               |
| Вид почвы                          | fertile, moist but not wet, calcareous sandy or loamy soil       |
| Влажность почвы                    | устойчив к сухим почвам                                          |
| Мощение                            | неустойчив к мощению                                             |
| Зона зимостойкости                 | 6 (-23,3 до -17,8 °C)                                            |
| Устойчивость к ветру               | moderate                                                         |
| Прочие виды устойчивости           | устойчив к морозам, зона 1 - 6                                   |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, медонос                          |
| Применение                         | небольшие сады, сады в патио                                     |
| Форма                              | штамбовое дерево, многоствольное дерево                          |
| Происхождение                      | Duncan & Davies Nurseries, New Plymouth, New Zealand, circa 1975 |

Large, usually multi-stemmed, shrub to small tree. The central leaderes and trunk grow fairly steeply, forming the broad, vase-shaped crown. The nearly round leaves are a glossy dark green, turning bright yellow in autumn. They feel rather thick and leathery. The flowers often appear before the leaves develop. They are a splendid, deep purplish pink and stand in compact clusters. 'Avondale' blossoms profusely even when young and stays small for the species. This warmth-loving tree prefers a loamy or fertile, moist but not too wet, calcareous soil in full sun.
