

Cladrastis kentukea

Высота	8 - 10 (15) m
Ширина	8-10m
Крона	flat globular, half-open crown, capricious growing
Кора и ветви	grey brown, smooth
Лист	odd-pinnate, fresh green, overall leaf 20 - 30 cm long, feathered leaf
Осенний окрас	желтый
Цветы	white in loose, pendulous panicles, late May/June, fragrant flowers
Плоды	flat pod, 8 - 12 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clay and sandy soils
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	good, when mature more susceptible
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево
Происхождение	south-eastern part of North America
Синонимы	Cladrastis lutea

A low branching tree with a wide, round crown that is rarely seen here. Is also sometimes grown as multiple-stemmed shrub. The trunk is grey brown and smooth, when mature shallow grooves may appear. The wood is strikingly yellow, especially when freshly sawn. The large, compound leaf consists of 7 to 9 ovoid to ovate leaflets, which are each 8 - 14 cm large. The separate leaflets are not opposite on the central stalk. They turn strikingly yellow in autumn. The loose, pendulous panicles with fragrant, white flowers are circa 25 cm long. In late summer the pods appear that turn from green through brown to purplish brown. Cladrastis kentukea has a big, fleshy root system and thrives best in a sunny, warm location but its hardiness is good. Damage to the young twigs of Cladrastis kentukea reveals yellow wood. The tree forms a characteristic trunk when older.
