

Cladrastis kentukea 'Perkin's Pink'

Высота	8 - 12 m
Ширина	8-10m
Крона	flat-topped spherical, half-open crown, capricious growing
Кора и ветви	grey-brown, smooth
Лист	imparipinnate, bright green, 20 - 30 cm long, feathered leaf
Осенний окрас	желтый
Цветы	pink, in separate, pendent panicles, end May/June, fragrant flowers
Плоды	flat pod, 8 - 12 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clay and sandy soils
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	good, more susceptible when mature
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево
Происхождение	Perkins Institute for the Blind, Waterton, MA, USA, before 1994

Large, multi-stemmed shrub or small to medium size tree with a semi-open, flat-topped, spherical crown. The bark is grey and smooth: shallow grooves may appear only when mature. The wood is strikingly yellow, especially when freshly sawn. The compound leaves consist of (5)7 to 9(11) elliptical to ovate leaf segments 8 - 14 cm in size. The leaf turns golden yellow in autumn. The loose, pendent flower clusters consist of numerous, delightfully fragrant, pink flowers. Was discovered as a seedling at the Perkins Institute for the Blind and distributed by the Arnold Arboretum. Typically for the species, it has a fleshy root system and grows best in a sunny, warm place. Very hardy.
