

Corylus avellana

Высота	5 - 7 m
Ширина	5-7m
Крона	round, dark, dense crown
Кора и ветви	grey-brown, somewhat flaking later
Лист	round to obovate, dark green, 5 - 14 cm
Цветы	♂ catkins, brownish yellow, 5 - 7 cm, ♀ inconspicuous, February/March
Плоды	edible nut, about 2 cm, partly enclosed by husk, edible fruits
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any as long as airy and well-drained
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к частичному мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Применение	кашпо для деревьев, сады на крыше, промышленные зоны, небольшие сады
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Europe to southern Scandinavia, Middle East, North Africa

Strong shrub that grows to multi-stemmed tree with densely branching, round crown. The brown young twigs are slightly hairy, the older bark starts to peel after some years. The matt green leaves are also hairy, making them feel a little rough. In autumn they turn into brownish yellow. The graceful, male catkins are already visible before winter, but open around late February. The small, red, female flowers grow from the leaf buds and are inconspicuous. The fruits ripen around September. The hazelnuts are partly enclosed by two carpels. The nuts contain many vegetable fats and proteins and are therefore a healthy delicacy. The root system is susceptible to suffocation. Can be used in any soil as long as it is adequately airy and drained.
