

Davidia involucrata

Высота	10 - 15 m
Ширина	8-12m
Крона	broad ovoid to rounded, half-open crown
Кора и ветви	light brown to grey-brown
Лист	heart-shaped to ovoid, fresh dark green, 7 - 14 cm
Цветы	small, in purple-brown heads, cream-coloured bracts, May
Плоды	long-stemmed drupe
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any humid, nutritious soil
Мощение	неустойчив к мощению
Зона зимостойкости	7a (-17,7 до -15,0 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	сустойчив к ветру
Дерево-среда обитания для животных	сустойчив к ветру, привлекает бабочек
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	Western China

Large tree that forms an undulating rounded crown later in life. In its natural habitat it grows to up to 20 m in height but in our climate its maximum is 15 m. The crown consists of sturdy branches that turn colour from olive green to yellow-brown. The trunk flakes off in various shades of grey. The leaves are heart-shaped to ovoid and tapered. It differs from the 'Vilmoriniana' variety in that the underside of the leaves is covered in grey hairs. The leaf edge is roughly serrated and the small flowers are in purple heads. The bracts make Davidia in full bloom an impressive sight. The creamy-white bracts hang down on either side of the flower heads. They are dissimilar in shape and size. The largest measure approx. 15 cm. The nut-like fruit hangs singly on long stems. Requires a sheltered site because of the risk of frost damage. You need a decade of patience before being able to enjoy the abundant flowers produced by Davidia involucrata.
