

Fagus sylvatica 'Pendula'

Высота	20 - 25 m
Ширина	25-35m
Крона	wide weeping, dark, dense crown, capricious growing
Кора и ветви	grey, smooth, soft bark
Лист	oval to ovate, dark green, 4 - 10 cm
Осенний окрас	желтый
Цветы	small inconspicuous flower catkins, May
Плоды	nuts, in capsule with brush-like spines, 1 - 2 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well-drained, rich in humus content, not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Форма	штамбовое дерево, разветвленное дерево
Происхождение	England, 1836

An ornamental, spreading beech with undulating upwardly growing branches. From these, floppy limbs droop down vertically, sometimes almost touching the ground. 'Pendula' can attain a height of 20 - 25 m. In the first years the growth rate is somewhat slow, later it becomes stronger. The soft bark is smooth and grey. The oval to ovate leaves are shiny dark green and 4 - 10 cm in size, in autumn they turn to yellow. Inflorescence with small, inconspicuous flower catkins that are followed by 1 - 2 cm large nuts in a bristled capsule. 'Pendula' is a graceful, specimen tree that with age displays an impressive appearance. It prospers in soil that is not too wet, well-drained and rich in humus content. Moderate wind resistance.
