

Fagus sylvatica 'Purpurea Tricolor'

Высота	10-15 m
Ширина	6-8m
Крона	round/spherical, dark, dense crown
Кора и ветви	grey
Лист	variegated
Осенний окрас	красный
Цветы	yellowgreen, flowers in May
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, peaty soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Форма	штамбовое дерево, разветвленное дерево
Синонимы	Fagus sylvatica var. roseomarginata

Fagus sylvatica 'Purpurea Tricolor' (syn. F.s. roseomarginata) has a spreading, open crown and attains a height of 10 - 15 m. It is conspicuous due to its peculiar leaf colour. The oval to ovate leaves are purple red at first. Later they get pink and creamy margins that have various widths. During the summer months the purple-red colour changes to brown purple. Size of the leaf is 4 - 9 cm. Moisture-retentive soil prevents scorching by the sun. Blooms inconspicuously. Park tree preferring well-drained soil, rich in humus content. Moderate wind resistance. Winter hardiness zone: 5b
