

Fagus sylvatica 'Quercifolia'

Высота	20 m
Ширина	18-20m
Крона	round/spherical, dark, dense crown
Кора и ветви	grey
Лист	green
Осенний окрас	желтый
Цветы	yellowgreen, flowers in May
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, peaty soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Форма	штамбовое дерево, разветвленное дерево

Fagus sylvatica 'Quercifolia' is a fairly tall tree with a spreading spherical crown. Height circa 20 m. The green leaf has some resemblance with that of the oak (Quercus). It is ovate to oblong and has short, wide lobes. The margin is sometimes toothed. The leaf has a very regular shape and turns yellow brown in autumn. Inconspicuous flowering. 'Quercifolia' thrives in soil that is not too wet, well-drained and rich in humus content. Suitable as a park tree and a solitary. Moderate wind resistance. Winter hardiness zone: 5b
