

Fagus sylvatica 'Remillyensis'

Высота	3 - 5 m (depending on graft height)
Ширина	6-8m
Крона	broad, weeping, dark, dense crown, capricious growing
Кора и ветви	smooth, grey bark, soft
Лист	oval to ovate, glossy green, 4 - 10 cm long
Осенний окрас	желтый
Цветы	small, inconspicuous flower catkins, May
Плоды	nuts, in cupules covered with brushy spines, 1 - 2 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well drained, humic soil, not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	небольшие сады, сады в патио
Происхождение	Remilly, France, circa 1820

A rarity that catches the eye because of its peculiar habit. 'Remillyensis' has an umbrella-like habit with twisted branches. The limbs droop, so that a weeping look is generated. The eventual height depends on the height of the graft union. It is a seldom grown cultivar. The leaf is shiny green and turns to yellow brown in autumn. The inflorescence is inconspicuous and is followed by small nutlets. This cultivar is used as a solitary in small gardens and parks. 'Remillyensis' prefers calcareous, moisture-retentive but well-drained soil that is high in humus content. The tree is intolerant to hard surfaces and a high water table. Winter hardiness zone: 5b
