*Fagus sylvatica 'Rohan Trompenburg'* is a seedling from '*Rohanii*'. Height 10 - 15 m, shape of crown is round. The brown-red leaf is oblong-ovate and moderately to deeply dissected with rounded lobes. With regard to its leaf '*Rohan Trompenburg*' resembles '*Rohanii*', but it grows distinctly stronger. Sometimes the leaf assumes the shape of '*Grandidentata*'. The leaf unfolds bright red, slightly sooner than *F. sylvatica*, leaf size 4 - 10 cm. Also the second shoot is strikingly red coloured. Park tree or solitary. Winter hardiness zone: 5b
