

Halesia monticola

Высота	15 - 20 m
Ширина	6-10m
Крона	wide-spreading to broad vase-shaped, half-open crown
Кора и ветви	grey to grey-black, the old trunk flakes off
Лист	oval to ovoid, fresh green, 8 - 12 cm
Осенний окрас	желтый
Цветы	white, bell-shaped, in bundles, April/May
Плоды	dry, winged drupe, approx. 4.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	warm site, porous and nutritious soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Форма	штамбовое дерево, многоствольное дерево
Происхождение	south-east of North America
Синонимы	Halesia carolina var. monticola

A medium-sized vigorous tree. In all respects larger than *H. carolina*. Branches and trunk are grey and older trunks flake off. The older branches bend, but the tree has a considerably narrower crown than *H. carolina*. The green leaves turn yellow in the autumn. The pendulous, bell-shaped flowers resemble snowdrops, are approx. 2.5 cm in diameter and occur in axillary bundles. They appear in particularly large numbers in the spring at the same time as the new leaves. The oval fruit has 2 to 4 longitudinal wings and hangs on thin stalks. They turn brown after ripening and remain hanging on the tree for a long time. The roots go down deep and are very hard. *Halesia* much prefers a humus-rich, lightly humid soil. It also grows well in acid soils.
