

## Hamamelis ×intermedia 'Pallida'

|                          |                                                        |
|--------------------------|--------------------------------------------------------|
| Высота                   | 4-5 m                                                  |
| Ширина                   | 4-5m                                                   |
| Крона                    | broad vase-shaped, half-open crown, capricious growing |
| Кора и ветви             | brown                                                  |
| Лист                     | green                                                  |
| Осенний окрас            | желтый                                                 |
| Цветы                    | yellow, flowers in December, fragrant flowers          |
| Плоды                    | brown                                                  |
| Колючки/шипы             | None                                                   |
| Ядовитость               | неядовитый, обычно                                     |
| Вид почвы                | loamy soil, sandy soil, peaty soil, acid soil          |
| Мощение                  | неустойчив к мощению                                   |
| Зона зимостойкости       | 6b (-20,5 до -17,8 °C)                                 |
| Устойчивость к ветру     | moderate                                               |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6                         |
| Применение               | кашпо для деревьев, небольшие сады, сады в патио       |
| Форма                    | штамбовое дерево, многоствольное дерево                |

Vigorous, sturdy shrub to small tree about 3 m high and 4 m wide, with a broad, fan-shaped growth pattern and a semi-open crown. The slightly glossy mid-green leaf turns yellow in autumn. The very profuse blossoming occurs in December/January. The flowers measure about 4 cm and are an intense sulphur yellow. They have a strong, very pleasant fragrance and the plant blossoms profusely every year. The exact origin of 'Pallida' is unknown, but the plant was named in 1958 at RHS Wisley Garden, UK. 'Pallida' is the best known yellow-flowering cultivar and generally regarded as one of the best Hamamelis cultivars.
