

Heptacodium miconioides

Высота	4 - 7 m
Ширина	3-6m
Крона	vase-shaped to nearly round, half-open crown, capricious growing
Кора и ветви	Twigs light grey-green, bark yellowish brown to brown, scaling
Лист	opposed, elongated ovate, with 3 main veins, dark green, 8 - 16 cm
Цветы	white, in separate panicles, September
Плоды	elongated capsule, with persisting purple-red calyx
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist but well-drained soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, привлекает бабочек
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Central and eastern China
Синонимы	Heptacodium jasminoides

Grows from a shrub into a small tree with a vase-shaped to round crown, up to about 7 m high. The young twigs are light grey-green. The mature bark turns yellowish brown and peels in fairly long strips. The leaves are dark green and three main veins are visible in the lamina. A purple autumn colour can sometimes be seen. The flowers are white, opening in large panicles in September. Each terminal flower on the main and side shoots of the panicle is surrounded by a wreath of 3 - 6 flowers. The English name 'Seven son flower tree' is derived from this. Through the blossoming period, the white flower crown falls and the calyx extends, turning purple-red over several weeks. This prolongs the tree's decorative value. Tolerates nearly any soil as long as moist but well-drained and adequately fertile.
