## Juglans regia 'Broadview'

Высота	15-20 m
Ширина	15-20m
Крона	round/spherical, half-open crown
Кора и ветви	grey
Лист	green, feathered leaf
Цветы	green, flowers in May
Плоды	edible fruits, brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, штамбовое фруктовое дерево

Juglans regia 'Broadview' is slower growing than the species and remains smaller. Height approx. 15 - 20 m. Suitable for smaller gardens. The shape of the crown, the trunk, the branches and leaves are identical to those of the species. After the emergence of the leaves the male and female flowers appear. They do not appear simultaneously. For this reason it is recommended that another cultivar, e.g. 'Buccaneer', should be planted close by to act as a pollinator. However fructification can be apomictic whereby solitary trees can also produce a reasonable quantity of fruit. Winter hardiness zone: 5b
