

## Juglans regia 'Coenen'

|                          |  |
|--------------------------|--|
| Высота                   | 10-15 m, fast growing                                |
| Ширина                   | 8-12m  |
| Крона                    | round/spherical, half-open crown                     |
| Кора и ветви             | grey   |
| Лист                     | green, feathered leaf                                |
| Цветы                    | yellowgreen, flowers in May                          |
| Плоды                    | edible fruits, brown                                 |
| Колючки/шипы             | None   |
| Ядовитость               | неядовитый, обычно                                   |
| Вид почвы                | clayed soil, loamy soil, sandy soil, calcareous soil |
| Мощение                  | неустойчив к мощению                                 |
| Зона зимостойкости       | 5b (-26,0 до -23,4 °C)                               |
| Устойчивость к ветру     | good   |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру    |
| Применение               | аллеи и широкие улицы                                |
| Форма                    | штамбовое дерево, штамбовое фруктовое дерево         |

Juglans regia 'Coenen' is a strong, vigorous tree with a broad, loose and open crown, attaining a height of 20 - 30 m. Trunk, branches and leaves are identical to those of the species. The leaves appear early in the year, which increases the risk of damage by night frost. After the emergence of the leaves the male and female flowers appear. They appear roughly simultaneously so that pollination is possible. But for effective pollination it is recommended that another type be planted close by, e.g. J. 'Buccaneer'. Winter hardiness zone: 5b
