

# Koelreuteria paniculata 'Coral Sun'

Высота	10 m
Ширина	8-10m
Крона	round to fan-shaped, irregular, half-open crown
Кора и ветви	young twigs radiant orange-red, bark grey-brown, shallow grooves
Лист	(bi-)pinnate, up to 50 cm, 7 to 9 pairs of leaf segments, yellow-green, feathered leaf
Осенний окрас	желтый, оранжевый
Цветы	yellow, in terminal panicles, July/August
Плоды	bladder-shaped, bronze coloured, about 4.5 cm, seeds black
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few soil requirements, tolerates drought
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, привлекает бабочек
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево
Происхождение	H. Kolster, Boskoop, Netherlands, 1993

Small to medium size tree with a rather irregular round to fan-shaped crown. The young twigs are intensely radiant orange-red and the leaves are bronze coloured on emerging. The first-year twigs later turn light yellow-brown and the leaves yellow-green. The shoots forming in summer also have these striking colours. The (bi-)pinnate leaf can be up to 50 cm long. The bark of the trunk eventually becomes grey-brown with shallow grooves. The blossom and fruits are typical of the species, but 'Coral Sun' generally blossoms less than others in the species. Has few demands as to soil but prefers a sunny, sheltered position.
