

Liquidambar formosana

Высота	20-25 m
Ширина	10-15m
Крона	broad vase-shaped, dark, dense crown
Кора и ветви	grey
Лист	green
Осенний окрас	желтый, оранжевый, красный
Цветы	yellowgreen, flowers in April
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, all soil types
Влажность почвы	устойчив к влажным почвам
Мощение	устойчив к мощению
Зона зимостойкости	7b (-14,9 до -12,3 °C)
Устойчивость к ветру	moderate
Форма	штамбовое дерево

Large, strongly branching tree with a sturdy, vertical, smooth trunk. Normally up to 20-25 m high, in some cases even up to 40 m. The crown is wide vase-shaped. The palmately lobed leaf has 3 to 5 lobes and the leaf underside is hairy. Inconspicuous flowers in April. The spiky brown capsules hang from long stems of about 3 cm. The dark green leaf turns dark red to deep purple in autumn. This Liquidambar has no corky fissures. Suitable for parks. Prefers moist soil, but should be planted in a sheltered location due to sensitivity to frost and wind.
