

## Liquidambar styraciflua 'Stared'

Высота	15 - 20 m
Ширина	5-7m
Крона	narrow pyramidal to pyramidal, dark, dense crown
Кора и ветви	Dark grey, grooved, hardly any corky fissures on branches and twigs
Лист	Palmately lobed, 7 lobes or splits, glossy green, 8 - 16 cm long
Осенний окрас	желтый, оранжевый, красный, фиолетовый
Цветы	purplish red, fairl inconspicuous, April/May
Плоды	round, spiky capsule, almost stemless or on short stem
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile, loamy soil
Влажность почвы	устойчив к влажным почвам
Мощение	устойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, многоствольное дерево
Синонимы	Liquidambar styraciflua 'Stella'

Large tree with a narrow pyramidal crown, up to approx. 20 m. Densely branching, even when mature. The grey bark has shallow grooves. The young twigs are light green and have hardly any corky fissures. The leaf is conspicuously star-shaped. This is reinforced by the lobes also having dissected margins, giving the leaf a double-lobed appearance. It turns orange, red, or purplish red, often with yellowish hues. The flowers are fairly inconspicuous and, unlike many other Liquidambar cultivars, purplish red. They are followed by round, spiky capsules that persist in the winter. Good park, avenue or street tree. Prefers fertile, moist soil: cannot tolerate persisting drought.
