

Magnolia ×loebneri 'Leonard Messel'

| | |
|--------------------------|--|
| Высота | 5 м |
| Ширина | 3-5м |
| Крона | broad ovoid, dark, dense crown, capricious growing |
| Кора и ветви | grey, green |
| Лист | green |
| Цветы | whitepink, flowers in April |
| Плоды | brown |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | clayed soil, loamy soil, sandy soil, peaty soil, acid soil |
| Мощение | устойчив к частичному мощению |
| Зона зимостойкости | 6 (-23,3 до -17,8 °C) |
| Устойчивость к ветру | moderate |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6 |
| Применение | аллеи и широкие улицы, небольшие сады, сады в патио |
| Форма | штамбовое дерево, многоствольное дерево |

Grows from a large, densely branching shrub into a broad, ovoid, small tree with a height of about 5 m. The star-shaped flowers open around mid-April to mid-May. They are about 12.5 cm in size and consist of about 12 narrow petals that are a warm, light purplish red on the outside. The inside is light pink to whitish pink. Discovered by James Comber, head gardener of Nymans Gardens in Haywards Heath, Sussex, UK. Its small size makes it suitable for residential areas, squares and gardens.
