

Magnolia denudata

Высота	6 - 9 m
Ширина	6-9m
Крона	ovoid to broad ovoid, dark, dense crown, capricious growing
Кора и ветви	twigs dark brown, bark grey-brown, rough
Лист	obovate to broadly elliptical, dark green, 7 - 15 cm
Цветы	white to light pink, about 10 cm, late March/April, fragrant flowers
Плоды	compound capsule, dark green to reddish, seeds have red husk
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	airy, well-drained
Мощение	устойчив к частичному мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы, небольшие сады
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	Eastern and southern China
Синонимы	Magnolia yulan

Medium-size tree with a broad ovoid crown, up to about 9 m. This height is attained only after many years. The tree can grow to over 15 m in the wild. The young twigs initially bear hairs but lose these after the first season. The mature bark is grey-brown and feels rough. The large, vase-shaped flowers are somewhat variable in shape and colour. The petals vary in width. The flowers are usually pure white, but wholly or partially light pink forms also occur. They have a delightful, citrus-like fragrance. The tree blossoms fairly profusely even when young, making it an attractive park tree.
