

## Magnolia ×soulangeana 'Alexandrina'

Высота	6-9 m
Ширина	6-9m
Крона	wide oval to round , half-open crown, capricious growing
Кора и ветви	brown, grey
Лист	green
Цветы	white-pink, purple-red, flowers in April
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево

'Alexandrina' is a fine cultivar of the well-known M. ×soulangeana. The tree grows distinctly upright and becomes medium-sized with a height of 6-9 m with a broad oval, later almost round crown. The tree does not flower very abundantly at a young age, but more than makes up for this later. 'Alexandrina' was named in 1831 by the French nurseryman Cels from Montrouge, now a district in Paris, France. Over the years, several clones under the name 'Alexandrina' have entered the market. In the clone grown in Europe, the flowers open in April and early May. They have the typical upright, tulip shape of M. ×soulangeana. The flowers are white, becoming darker purple-red towards the base. The tree is very suitable as a park tree or in larger gardens. Hardiness zone 6b.
