

## Malus 'Elise Rathke'

|                                    |                                                            |
|------------------------------------|------------------------------------------------------------|
| Высота                             | 3 m                                                        |
| Ширина                             | 3-4m                                                       |
| Крона                              | broad weeping, half-open crown                             |
| Кора и ветви                       | brown                                                      |
| Лист                               | green                                                      |
| Цветы                              | light white, pink, flowers in May                          |
| Плоды                              | edible fruits, red                                         |
| Колючки/шипы                       | None                                                       |
| Ядовитость                         | неядовитый, обычно                                         |
| Вид почвы                          | clayed soil, loamy soil, sandy soil, acid soil             |
| Мощение                            | устойчив к мощению                                         |
| Зона зимостойкости                 | 3 (-40,0 до -24,5 °C)                                      |
| Устойчивость к ветру               | good, susceptible to sea wind                              |
| Прочие виды устойчивости           | устойчив к морозам, зона 1 - 6, сустойчив к ветру          |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос |
| Применение                         | промышленные зоны, небольшие сады, сады в патио            |
| Форма                              | штамбовое дерево, штамбовое фруктовое дерево               |

Top-grafted small tree with well branching, broad weeping crown. It grows to approx. 3 m tall. The oval leaves have a pointed tip and are glossy green on top, grey-green and hairy on the underside. The flowers are approx. 5 cm, pale pinkish, opening around early May. The flower buds are pink. The relatively large edible fruits measure up to 5 cm across. They are green-yellow with a red blush and edible. This old cultivar, introduced in 1886 by Baumschule Späth in Germany, is sometimes wrongly used as a synonym of *M. pulima* 'Pendula'. A quaint tree that is very susceptible to scab.
