

Morus alba 'Macrophylla'

Высота	10 - 15 m
Ширина	7-12m
Крона	broad pyramidal to practically round, half-open crown
Кора и ветви	light grey, bark has regular grooves
Лист	palmetely lobed, dark green, 15 - 25 cm
Цветы	unremarkable pendulous catkins, green, May/June
Плоды	red, approx. 1.5 - 2 cm, more elongated than those of the species, edible fruits
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	light, well-drained soil, preferably calcareous
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Форма	штамбовое дерево
Происхождение	France, approx. 1815
Синонимы	Morus alba 'Platanifolia'

The crown of this medium-sized tree is broad, open and has tangled branches. It can eventually attain a height of approx. 15 m and a width of approx. 6 - 7 m. The most remarkable difference with the species is the size of the leaves. The leaves are also more regular in shape and less rough. It also shows more vigorous growth than the species. The monoecious tree has unremarkable male and female flowers. The small fruits somewhat resemble raspberries and are red to dark red in colour. They have a bland to slightly sweet taste. This is a tree for a sunny, warm, sheltered site. Saplings are sensitive to frost. Likes chalky soils and grows in poor soil. The familiar M. alba 'Platanifolia' is actually 'Macrophylla'. 'Platanifolia' is therefore a synonym. In the trade 'Macrophylla' is often confused with M. bombycis.
