

Nyssa sylvatica

Высота	15 - 25 m
Ширина	8-12m
Крона	broad pyramidal to broad ovoid, half-open crown, capricious growing
Кора и ветви	trunk dark grey and grooved, twigs greenish brown
Лист	inverse ovoid to oval, dark green, 5 -12 cm
Осенний окрас	оранжевый, красный
Цветы	unremarkable, greenish, April/May
Плоды	ovoid drupe, dark blue, Ø 0.9 - 1.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	preferably loamy, not too dry
Влажность почвы	устойчив к влажным почвам, устойчив к коротким наводнениям
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	central and eastern USA as far south as north-eastern Mexico

This tree naturally occurs in swampy areas in the eastern regions of North America. But it can also grow to become a tall tree in less moist areas. The broad, pyramidal crown is formed by branches that later hang straight down. This eventually produces a broad, ovoid, almost round crown. Crown width approx. 12 m. Young branches have round lenticels. The glossy leaves are oval to inverse ovoid. They have a smooth edge, sometimes slightly lobed with the top of the leaf tapering to a point. The tree has become well-loved thanks to its autumn colour. In the autumn, the tree is especially lovely, decked out in dark red, orange and sometimes yellow tints. The colour depends on the type of soil. The roots grow very deeply, making the tree difficult to transplant.
