A German selection with a pyramidal crown and a vertical main trunk. Height 15 - 20 m. It is characterised by the flaking bark with a light green to yellow-green underground, and grey-green, dark green or brown pieces that flake off. The broad palmate lobed leaf has 3 - 5 sharply serrated lobes and is slightly hairy on the underside. In the autumn the leaves turn colour to a brownish yellow. Fallen leaves do not rot easily and remain on the ground around the tree. Plane trees are very resistant to hard surfaces but surface roots can push the surrounding paving upwards. Takes pruning very well, even in old wood. Saplings are sensitive to frost and need a tree stake for support. Winter hardiness zone: 6a
