

Platanus ×hispanica

TREEVOLUTION® ('Woodside Column')

Высота	20-25 m
Ширина	5-10m
Крона	columnar, later small oval, half open crown
Кора и ветви	grey-green and yellow-green, flaking
Лист	palmately lobed, 12-25 cm long, dark green
Цветы	bulbous heads, yellow-green, mei
Плоды	spherical, spiky, brown, usually 2 together
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all, soil not too calcareous
Мощение	устойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, устойчив к соли для улиц
Применение	аллеи и широкие улицы, узкие улицы
Форма	штамбовое дерево

'Woodside Column' is a large tree to about 20-25 m tall. The crown is long columnar, but will widen in later life, becoming more or less narrowly oval. The twigs and bark have the same distinctive colours as P. ×hispanica. The grey-green and yellow-green exfoliating bark is therefore an attractive added ornamental feature in 'Woodside Column' too. At 12-25 cm, the hand-lobed leaves are the same size as in P. ×hispanica. However, the leaves are darker green, giving the tree a healthy appearance. They turn brownish-yellow in autumn.

'Woodside Column' grows in all soils that are not too calcareous. The tree is moderately to well wind resistant, but sea wind is not tolerated. Suitable for use as avenue, street and park tree. Atmospheric tree in old lanes and along canals.
