

Prunus armeniaca 'Tros Oranje'

Высота	4-6 m
Ширина	3-5m
Крона	flatened spherical, half-open crown
Кора и ветви	brown
Лист	green
Цветы	white, pink, flowers in March-April
Плоды	edible fruits, yellow, orange
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	fairly to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	кашпо для деревьев, небольшие сады, сады в патио
Форма	штамбовое дерево, штамбовое фруктовое дерево

'Truss Orange' is an apricot tree with a semi-open, flattened spherical crown. The tree grows 4-6 m tall. The tree flowers around mid-March to early April. The flowers are very light pink to almost white. The apricots are relatively small, making them easier to ripen in the temperate and maritime climate of north-western Europe. The fruits ripen in August and can be used both for direct consumption and for storage. The smaller fruit size makes apricots very suitable for storage. The skin is deep yellow to light orange and the flesh is firm and tastes pleasantly sweet. 'Truss Orange' is a self-pollinating variety and generally produces a lot of fruit, which also makes it popular with consumers. Cross-pollination with other trees will only enhance production. Hardiness zone 6a.
