

Prunus avium 'Plena'

Высота	8 - 12 m
Ширина	8-10m
Крона	round, half-open crown
Кора и ветви	bark glossy brownish-red
Лист	ovoid, dark green, 6 - 15 cm
Осенний окрас	желтый, оранжевый
Цветы	white, double, late April/early May
Плоды	none, fruitless cultivar
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	calcareous, fertile, sandy soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	France, 1700

This medium-sized tree has a rounded and regularly branched closed crown. It can eventually attain a height of 8 - 12 m and has a deeply penetrating taproot with very strongly developed lateral roots. The glossy bark is brownish-red. The ovoid dark green leaves attain a size of 15 cm and turn orange-yellow in the autumn. The leaves have an irregularly serrated edge. The tree produces bundles of white double flowers. These are 2-3 cm in size and emerge in late April to early May. 'Plena' is sterile and therefore produces no fruit. It is mainly used as a park and avenue tree. In order to be able to grow well the tree requires humid, fertile, sandy soil. Preferably calcareous.
